

## YAMAHA BABY MUSIC

for children aged 18 to 36 months

**objective** : music as an everyday language

Baby Music is designed to bring music into children's lives, so that it becomes a daily language and thus express feelings, emotions, developing language skills. In fact, music is a language and through this path children learn it as they learn to speak: this is why there are three main subjects, each with a specific goal.

Through the SONGS WITH WORDS children first develop the ability to speak and then to sing, learning to use the body's natural musical instrument: the voice.

Through the SOUND STORIES, children discover the musicality and rhythm of the word, with specific lyrics to be experienced while playing with mum and dad.

Through GUIDED LISTENING children learn to listen to music, imagining it, living it with movement and gradually understanding the basic rules and structures.

The course is biennial for children from 18 to 24 months and annual for children from 24 to 36 months, with 30 group lessons per year (15 per semester), of 30 minutes each, once a week, together with dad or mom.

Request the course calendar from the contacts indicated below.
